PROFESSIONAL SUMMARY

Backend engineer specializing in Python and FastAPI, with hands-on experience leading the architecture and delivery of a RAG pipeline, a fault-tolerant price enrichment engine, and a security-critical multi-tenant platform. Focused on reliability, data isolation, and secure-by-design systems; orchestrates AI coding agents under full technical ownership. Full-stack background with Next.js and TypeScript.

TECHNICAL SKILLS

Python	FastAPI
SQLite	SQLAlchemy
JWT Authentication / Authorization	PostgreSQL
Docker	Vector Databases
Pytest	RAG
Pydantic	React
Next.js	Javascript
Typescript	Tailwind css
React Query	Git/Github
Rest API	SSR, SSG, ISR, CSR
CI/CD (Github Action)	Linux

PROFESSIONAL EXPERIENCE

Backend Developer, Jaavdan	06/2026 remote
• Served as sole technical lead, architecting and delivering an end-to-end RAG pipeline that transforms unstructured Persian/English documents into a searchable knowledge base — spanning ingestion, OCR with automated accuracy evaluation, preprocessing, intelligent chunking, and embedding generation. • Architected and delivered a fault-tolerant, production-grade price enrichment engine — spanning resilient multi-source ingestion, fallback strategies, data validation, stale-value protection, and scheduled processing — powering reliable, normalized market and commodity pricing across the Iranoban platform. • Architected and delivered a security-critical, multi-tenant organizational calendar platform — enforcing strict data isolation, role-based access control, scoped rate limiting, persistent IP blocking, and comprehensive security validation — ensuring secure separation of data and operations across organizations at scale.	

- Orchestrated AI coding agents as a scoped execution layer, retaining sole ownership of architecture, diagnosis, test strategy, and output validation across the full development lifecycle.

Freelance Full-Stack Developer

05/2024 – Present

- Delivered responsive websites for 5+ small businesses with Next.js and React, and redesigned 13+ pages of a freelance marketplace platform with its product manager, working directly with clients from requirements gathering to delivery.

KEY PROJECT

Multi-Tenant SaaS Digital Menu Platform

Feature-based, modular full-stack platform giving cafés and restaurants an isolated digital menu system per tenant. Built with multi-level RBAC (Platform Super Admin, Organization Admin, Member, Public User), strict tenant isolation, and a scalable feature-first architecture across both frontend and backend.

E-Commerce UI Prototype, *Developed a responsive shop interface with product filtering and cart simulation.*

- Tech stack: React, React Router, CSS Modules

Education

Bachelor's degree in Computer Engineering, Azad University

2024
